

# SPS ANTI VIBRATION MOUNTS

AMC-MECANOCAUCHO® SPS type anti vibration mounts are comprised of two pressed metal parts, a cup shaped Top Cap and a pressed steel inverted cup shaped base into which two moulded rubber sections are assembled and then secured by means of swaging with a threaded centre insert to complete the assembly.

## TECHNICAL CHARACTERISTICS

Due to their design , SPS mounts can work with compression and tensile loads , isolating effectively by using the friction of the rubber sections with the inner surfaces of the assembled metal parts. It is most effective in applications where high frequency vibrations are predominant. Various rubber compounds are available for assembly depending upon the applications being considered, ie , high temperatures, oil and diesel resistance, ageing resistance against Ozone attack for example .

## APPLICATIONS

With a captive rubber unit the SPS mounts afford total safety in Mobile applications. They are compact in design for the range of loads to be supported and can be manufactured in Stainless Steel metal parts as an option for Food Industry applications, and coupled with appropriate compounds for environments involved , ie , Food Industries . Applications range from high speed operational equipment such as Refrigeration units , Compressors, Transformers , HVAC units on trains and Passenger Transport .
